Downloads API

Download a File

Endpoint: `GET /api/Downloads/book/{book_id}/{user_id}`
Authorization: Required

Request Parameters

Parameter	Type	Description
book_id	int	The ID of the book to download.
user_id	int	The ID of the user requesting the download.

Response

Success (200)

Returns the requested file for download.

Failure Responses

- `404 Not Found` - Book or file not found.
- `401 Unauthorized` - If the user is not authorized.

Get All Download Logs

Endpoint: `GET /api/Downloads/get-all-download-log`
Authorization: Required

Response

Success (200)

Returns a list of all download logs.

```
{
    "downloadLog": [
        {
            "id": 1,
            "bookId": 5,
            "userId": 10,
            "downloadDate": "2024-03-10T12:34:56"
        }
```

```
        ]
    }
}
```

Failure Responses

- `404 Not Found` - If no download logs are available.
- `401 Unauthorized` - If the user is not authorized.
